EDUCATION

Sacred Heart University, Jack Welch College of Business & Technology

Bachelor of Science, **Computer Engineering**

Minor, **Mathematics**

GPA: **3.8**

Fairfield, CT

May 2026

WORK EXPERIENCE

Software Engineering Intern | Sentari AI

June 2025 – August 2025 | Remote

- Developed production frontend features using Next.js, React, TypeScript, and Tailwind CSS for an analytics dashboard supporting 500+ active users.
- Designed and implemented an admin analytics dashboard tracking referrals, retention, engagement, and user growth using Supabase RPCs and REST APIs.
- Built backend APIs and data pipelines with Flask and Supabase to improve data accuracy and automate reporting workflows.
- Collaborated on a 10+ engineer cross-functional team using GitHub workflows, pull requests, code reviews, and structured documentation to deliver production-ready software.

PROJECTS

One Piece TCG Shelf | Full-Stack Web Application | Next.js, React, TypeScript, Supabase, PostgreSQL, Tailwind CSS, Vercel

- Designed, built, and deployed a production full-stack collector platform enabling users to browse a trading card catalog, manage collections, track portfolio value, and share public collector profiles.
- Built secure backend infrastructure with Supabase (PostgreSQL, Auth, Storage, Row Level Security) powering authenticated collections and protected APIs.
- Developed a server-side market pricing pipeline with cached portfolio valuation to eliminate browser API calls and protect API credentials.
- Implemented collector features including graded slabs, Collector's Showcase, portfolio valuation, trade offers, activity feeds, public profiles, and profile customization.
- Architected the application using Next.js App Router, React Server Components, reusable domain-driven components, GitHub Actions CI/CD, and Vercel deployment.

AI Aim Trainer Project | Independent | Unity, C#, Game Systems, Real-Time Adaptation

- Engineered an adaptive aim trainer in Unity using C# that dynamically adjusted gameplay difficulty from player performance.
- Designed modular AI behavior, spawning, UI, scoring, and analytics systems.
- Implemented adaptive difficulty algorithms using reaction time and accuracy metrics.

Pinball Machine Capstone Project | Software Lead | Python, Raspberry Pi, Pygame, GPIO, GitHub

- Led software development for a full-scale interactive pinball machine integrating Raspberry Pi hardware with real-time game software.
- Developed modular Python architecture for GPIO communication, scoring, audio, game logic, and hardware event handling.
- Integrated sensors, solenoids, LEDs, and 24V power systems while debugging hardware/software interactions throughout system integration and testing.

SKILLS

Languages	TypeScript, JavaScript (ES6+), Python, C, MATLAB
Frameworks	React, Next.js, Node.js, Flask, Tailwind CSS, Framer Motion
Backend & Databases	Supabase, PostgreSQL, REST APIs, Row Level Security (RLS)
Developer Tools	GitHub, GitHub Actions, Docker, Postman, Vercel VS Code Visual Studio ESLint Vitest, Cursor,
Additional	CI/CD, Responsive Design, Server Components, App Router, Raspberry Pi, Unity, Pygame, Data Pipelines, Data Analytics

ACTIVITIES

Member, **IEEE**, National Society

New Member Educator, **Sigma Chi Fraternity**

September 2022 – Present

September 2023 – Present

CERTIFICATIONS & Awards

Fundamentals of Engineering (FE) Exam, Electrical and Computer | NCEES
