Education

Sacred Heart University

May 2026

Bachelor of Science in Computer Engineering, Minor in Mathematics

Fairfield, Connecticut

- Magna Cum Laude — 3.76

Relevant Coursework

- Data Structures
- Discrete Structures
- Data Communication
- Cloud Computing,
- Embedded Systems
- Signal Processing
- Computer Architecture
- Digital Design

Experience

Sentari AI

June 2025 – August 2025

Software Engineering Intern

Remote

- Developed production full-stack features using Next.js, React, TypeScript, Flask, and Supabase for an analytics platform serving 500+ active users.
- Designed an admin analytics dashboard tracking referrals, retention, engagement, and user growth using Supabase RPCs and SQL.
- Built REST APIs and backend data pipelines while collaborating through pull requests, code reviews, and documentation on a 10+ member cross-functional team.

Projects

One Piece TCG Shelf | *Next.js, React, TypeScript, Supabase, PostgreSQL*

- Built and deployed a full-stack collector platform for browsing cards, managing authenticated collections, tracking portfolio value, and sharing public profiles. .
- Developed secure backend infrastructure using Supabase PostgreSQL, Auth, Storage, protected APIs, and Row Level Security. .
- Built a server-side market pricing pipeline and implemented trade offers, activity feeds, graded-card tracking, customizable showcases, and CI/CD deployment.

AI Aim Trainer | *Unity, C#, Game Systems, Real-Time Adaptation*

- Engineered an adaptive aim trainer in Unity using C# that dynamically adjusted gameplay difficulty based on player accuracy and reaction time.
- Designed modular systems for game state management, target spawning, shooting mechanics, scoring, UI, and performance analytics.
- Implemented adaptive difficulty algorithms that modified target speed, size, and spawn rate to provide responsive real-time gameplay.

Pinball Machine Capstone | *Python, Raspberry Pi, Pygame, GPIO*

- Led software development for a full-scale interactive pinball machine integrating Raspberry Pi hardware with real-time game software.
- Developed modular Python architecture for GPIO communication, scoring, audio, game logic, and hardware event handling.
- Integrated sensors, solenoids, LEDs, and 24V power systems while debugging hardware-software interactions throughout system testing.

Technical Skills

Languages: Python, TypeScript, C++, HTML/CSS, JavaScript, SQL

Developer Tools: VS Code, Git, GitHub, Docker, Postman, Vercel, VS Code, Visual Studio, Cursor

Technologies/Frameworks: Linux, Windows, React, Next.js, Node.js, Flask, Tailwind CSS, Pygame

Backend & Databases: Supabase, PostgreSQL, REST APIs, Row Level Security, Data Pipelines

Leadership / Extracurricular

Sigma Chi

Fall 2023 – Spring 2026

Founding Father & New Member Educator

Sacred Heart University

- Helped establish and grow the chapter as a founding member while supporting recruitment, member development, and chapter initiatives.
- Served as New Member Educator, guiding new members through on boarding, expectations, and integration into the fraternity.
